### **Overview**

Each year, the world observes the **International Day for the Elimination of Violence against Women** to honor the resilience of survivors and reaffirm our shared commitment to end conflict-related sexual violence (CRSV).

Technology has transformed societies across the globe, creating opportunities for connection, creativity, and peacebuilding. Yet it has also enabled harmful practices, including **CRSV** and **technology-facilitated human trafficking**. At the same time, innovations in **Artificial Intelligence (AI)** present both risks and opportunities: AI can perpetuate harm if misused, but it can also be a powerful tool for prevention, ethical storytelling, cultural expression, and peacebuilding. This event seeks to bring together **policymakers, AI leaders, peacebuilders, civil society actors, survivor advocates, and youth voices** to discuss both the threats and opportunities at the nexus of **technology, CRSV, and peacebuilding**.

**“AI for Peace: Amplifying the voices of survivors of conflict-related sexual violence (CRSV)”** will explore how ethical and human-centered AI, technology, and creative innovation can be mobilized to counter CRSV, support WPS agenda and promote peace.

Organized jointly by UNITAR, the Kigali Genocide Memorial, and Generative AI for Good, the event will present **"Hearing Their Voices"**, a global initiative led by Generative AI for Good, which uses generative AI to safely share testimonies of survivors of CRSV and gender-based violence in an ethical and survivor centered approach.

## Objectives
