

Blockchain Finance Concept Note

Title: **Blockchain Finance Implementation for Poverty Eradication and Metropolis Policies**

1.Overview:

In the 4th industrial revolution era, the world and mankind have encountered both new opportunities and crises. Most importantly, financial system itself is adopting blockchain technology. Among many other advantages of blockchain technology, the most irresistible advantages are its fairness, transparency, safeness, low transaction cost and its potential that embraces many other technologies. So blockchain technology can perform unimaginable tasks that the original financial system couldn't do. Thus, the governments, financial institutions and corporations who noticed the potential of blockchain technology are already adopting this technology, and it is now becoming popularized faster and wider.

Specially, the fact that blockchain currency has possibility to apply many different technologies to itself can prevent a currency from being controlled and monopolized by a single corporation or a powerful authority who has the purpose of sovereignty violation. In other words, blockchain currency at this moment is standing at the crossroad of implementing technologies to ensure humanity "Survival Rights" and to accomplish 17 sustainable development goals of UN Agenda 2030 such as poverty eradication, zero-hunger and good-health and well-being.

2.Purpose:

The purpose of conference to develop technologies and features that can provide survival money policies, global citizen society politics and solutions for ageing society by inviting the representatives and experts who lead the blockchain related regulations and technologies. And we make agreement on establishing professional organizations and committees in order to support UN Agenda and provide future directions of blockchain finance model.

3.Conference Outcome:

Through the agreement made by NGOs during the conference, focusing on 510 metropolises, the messages of conference will be delivered to each city and citizen, and national representatives and professional organizations will provide the future direction of blockchain technology development. Moreover, our society not only will be stabilized and freed from confusion that had been caused by current financial systems, but also will be able to expect the future that guarantees the higher quality of life with hope.

Especially, the models with technologies that ensure survival rights will be introduced. And by the agreement of participants, Survival Money will be automatically donated in order for poverty eradication and zero-hunger to be accomplished by implementing these models and technologies. The processes and results of conference will be reported to UN Member States, UN Organizations and the UN Secretary-General.

4.Hosts:

ISEA Foundation in Special Consultative Status of UN ECOSOC, Governments and government branches who are preparing policies for blockchain finance, corporations and experts who already have field experience in blockchain finance, the organizations who cooperate in blockchain finance with ISEA Foundation.

5. Programme and Format:

The Conference Planning Committee will be responsible for developing all elements of the programme, which shall include opening and closing plenary

6.Participants:

The NGOs who work for MSGnet project (Metropolis Servant-leadership Governance Civil Network) and Servant Leadership policies, focusing on 510 metropolises and the other 60 organizations who showed participation intention will be invited. Also, various government branches, financial institutions, blockchain professional organizations and renowned experts who speak during the

conference will be invited. And the mayors from the 510 metropolises will be invited. Our target number of participants is 300 participants from NGOs and 200 experts from various countries.

7.Conclusion:

Blockchain finance is an automated financial system that guarantees survival human rights. It suggests the direction of sound development of the 4th industrial revolution era, which promotes the future of global civil society and accomplishes poverty eradication and zero-hunger. This will be a significant turning point in setting sustainable development goals.
